**The 3rd Workshop on the  
Water Rescue and Survival Research**

**November 29~ December 1, Jakarta, Indonesia**

Skill needed by water accident victims

With instructor training course for survival floating

*“Uitemate”* is an important motto to help survive sudden water accidents. When a person encounters a water related incident, it is vital to keep the air-war free by floating on their back (*uite*) and waiting for a rescuer to come to their assistance (*mate*). *Uitemate* challenges the current thought of water rescue to where the victim plays the leading role, not rescuer.

## Welcome Message

It is our great honor and pleasure to host the 2014 annual Water Rescue and Survival Research, uitemate (uitemate2014) Workshop in Jakarta, Indonesia, November 29~ December 1.

The main theme of uitemate2014 will be *the skills needed for water accident victims*, that being said, papers on all aspects of water rescue and survival research are welcome. There will be sessions that address new theory, methodology and application related to water rescue and survival. This workshop also provides to all participants an instructor course for survival floating. This course is well-known in Japan and more than 2,100 instructors have been trained in the last decade.

We are confident that every participant's intellectual pursuits will be satisfied with the scientific program, instructor course and social events that we are planning.

Jakarta is a capital city of Indonesia. Jakarta is actually filled with sightseeing and tourist attractions, lots of shopping malls and hidden back streets for nightlife, food and fun.

We welcome all of you.
